

The globalised world
is our market.

FIEGE

The World of Logistics

We offer high-end logistics – worldwide.

Our strategy is to provide services with the greatest possible added value.

The complex logistics services from FIEGE stand for the smooth supply of goods on global markets. In order to make these original services also appeal to the customer, FIEGE solutions are immediately clear from the start, and are tailored according to specific market and goods category demands.

The classic outsourcing model means you benefit in two ways: You increase the efficiency and professionalism of your logistics services and can thus concentrate more on your core business.

The joint venture is a continuation of outsourcing into an equal win-win partnership. Combine the logistics skills at FIEGE with the knowledge of your trade. In this way, we pool our individual skills into joint productivity.

With 3.1 million square metres of storage and logistics space, FIEGE is able to offer a wide range of different logistics services and value-added services according to individual demands.

Air

- Returns systems
- Reuse
- Poste restante management
- Recycling
- Transport and logistics
 - Waste logistics
 - Returns logistics
 - Container logistics
- Value-added services

 www.fiege-relog.de

FIEGE offers perfectly tailored road transport systems for a wide range of goods.

In order to meet profitability and quality demands, FIEGE provides all services required from a lead logistics partner (LLP) in the transport and distribution branch.

Air & Ocean

Whether it is wine imports from South America, chemicals from India, heavy goods consignments to the Middle East or regular shipping from the booming Asian markets – all of these tasks are in safe hands when using the FIEGE A+O team. The chartering of aircraft is also part of our portfolio (e.g. for shipping urgently needed antibiotics to Africa). FIEGE handles consolidated containers (FCL or LCL) to and from the Far East and USA on a regular basis, and is thus able to offer competitive complete prices.

Transportation

Our national and international road transportation team organises partial and direct transportation both at home and abroad from our distribution hubs. Our team also has a wide network for dealing with general cargo shipments.

Foodstuffs are transported in thermostable and temperature-controlled containers. General cargo is also transported in all its forms, from standard goods to oversized and hazardous goods. Our own tyre logistics network and highly-specialised IT capabilities round off our range of services.

B2C/Parcel Deliveries

The B2C/Parcel Deliveries team is responsible for complex national and international deliveries, including the selection and monitoring of the

appropriate shipping method, the handling of purchasing and invoicing functions for customers/partners and final invoicing with the carrier. National and international parcel shipment is part of our services, as is the transportation of oversized packages, express shipping and the shipping of hazardous goods.

Reverse Logistics

The importance of optimal, flexible Reverse Logistics continues to grow. The FIEGE Group can offer integrated solutions here, in addition to transport logistics for supply and disposal in business across Europe. FIEGE covers the complete logistics and recycling chain, and offers individual services ranging from product returns to recycling and marketing. The comprehensive FIEGE service package includes analysis, consultation and implementation.

Personnel Logistics

FIEGE uni/serv GmbH is responsible for personnel logistics in the FIEGE Group, and connects logistics and personnel know-how. As a certified training provider, we offer qualifications and integration for jobseekers and further training for employees and external participants. As a result, we are able to offer special contracted solutions for the short-term provision of logistics personnel right up to the implementation of logistics sub-processes.

On the move for you – worldwide.

The more efficient the partner, the greater the added value.

The closely-linked FIEGE delivery network combines transport by road, rail, air and sea according to economical and ecological regulations.
